
Housing Affordability Impact Analysis

Ryan Shedd

City of Miami – Planning & Zoning Department

Community Planning Division

Background

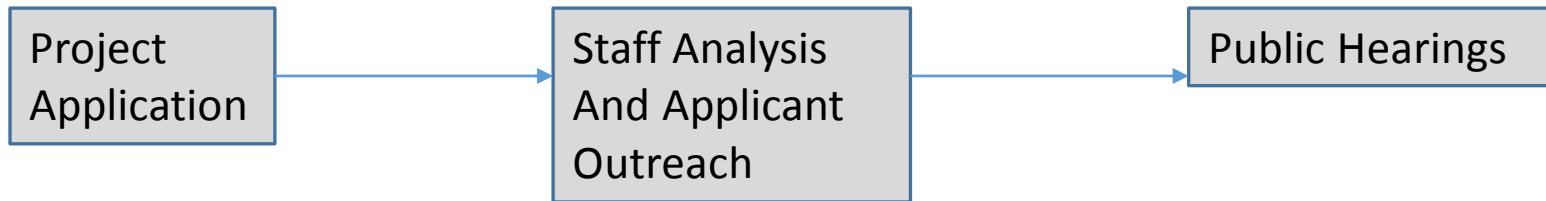

- Professional:
 - Urban Planning & Policy
 - Design of the built environment and its effects on quality of life

Problem

- Discordant Relationships

- We measure concurrency for infrastructure, why not housing?

- Real-time examples moving through development process
- Community meetings and public feedback

- Concurrency Management Analysis: Evaluates the availability of services with respect to proposed development and changes in demand
- Framework: Qualitative scope first, then quantitative
- Applicable guide for future proposals to ensure housing affordability is addressed

What can the public do?

Inquire

Communicate
